

Amit Kumar

Software Engineer | Java | Spring Boot | Python | Full Stack Development
+91 8669223920 | amitk200703@gmail.com | [LinkedIn](#) | [Github](#) | [leetcode](#) | [portfolio](#)

Profile

Software Engineer with experience in Java, Spring Boot, Python, REST APIs, and full-stack application development. Built scalable backend systems, enterprise applications, and web platforms using modern software engineering practices. Strong foundation in Data Structures Algorithms, Object-Oriented Programming, DBMS, Operating Systems, and Computer Networks.

Education

Indian Institute of Information Technology, Sri City *Andhra Pradesh, India*
B.Tech in Electronics and Communication Engineering **CGPA: 7.85/10 | Graduation: 2026**

Experience

AI/ML Research Intern — Defence Research and Development Organisation (DRDO) May – July 2025
Visakhapatnam, Andhra Pradesh | [Kaggle](#) | [Report](#)

- Built and optimized data processing and object detection pipelines using Python and PyTorch on 8,000+ sonar images.
- Designed end-to-end ML pipeline (data preprocessing → training → evaluation) using PyTorch for scalable experimentation.
- Reduced inference latency and enabled near real-time processing through pipeline optimization.

Projects

MiniTrello – Enterprise Task Management System *Java | Spring Boot 3 | React.js | MySQL | Swagger | REST APIs* | [Code](#)

- Developed a scalable **Kanban-style task management system** supporting multi-board collaboration, analytics dashboards, audit logging, and real-time task tracking using Spring Boot and React.
- Architected backend services with **Spring Data JPA and RESTful APIs**, implementing entity relationships, activity logging, automated database initialization, advanced filtering/search, and production-oriented exception handling.
- Implemented interactive frontend features including board management, task tagging, overdue indicators, analytics visualization, and responsive dashboard components using React, Vite, Axios, and modern UI design principles.
- Enhanced developer experience by integrating **Swagger OpenAPI documentation**, modular service architecture, and maintainable component-based design patterns for scalable full-stack development.

AI Financial Automation Platform *Python | FastAPI | LangChain | PostgreSQL | Redis | Docker* | [Code](#) | [Demo](#)

- Developed RESTful APIs using FastAPI to automate financial workflows, supporting scalable backend workflows and automated reporting.
- Designed a modular service-based backend architecture for data ingestion, reconciliation, and reporting, improving scalability and maintainability.
- Integrated LLM-powered workflows using LangChain and OpenAI APIs for intelligent automation and reporting, reducing manual effort by 80%.
- Containerized the application using Docker and leveraged AI-assisted tools like Cursor to accelerate development, debugging, and code optimization.

Meal-Monkey *MongoDB | Express.js | React.js | Node.js | Redis | Docker* | [Code](#) | [Live](#)

- Developed a **full-stack multi-role food delivery platform** with dedicated dashboards using React and Node.js.
- Built and integrated **REST APIs** for complete order lifecycle (cart → checkout → tracking) with dynamic frontend interaction.
- Optimized performance using **Redis caching, indexing, and pagination**, reducing latency by **20%**.
- Implemented **JWT-based authentication and RBAC** with Dockerized deployment for scalability.

Technical Skills

- Languages:** Java, c++, Python, JavaScript, TypeScript
- Software Development:** Object-Oriented Programming, Data Structures & Algorithms (DSA), REST APIs
- Frameworks & Technologies:** Spring Boot, FastAPI, React.js, Node.js, Express.js, HTML5, CSS3
- Databases:** MySQL, PostgreSQL, MongoDB, Redis, SQL
- Cloud & Tools:** AWS, Docker, Git, CI/CD, Cloud Fundamentals
- Core Subjects:** DBMS, Operating Systems, Computer Networks

Achievements

- Solved 400+ DSA problems with strong focus on optimization and edge cases
- 3★ in python** and **3★ in Problem Solving** on HackerRank.
